(54) Title: SCREEN FOR GASES

(57) Abstract. The invention refers to a screen for gases intended to prevent passage of particles bigger than different, defined dimensions at the same time as the pressure drop existing over the screen is as low as possible. The screen (1) is built up of rings (2) connected together to a cylindrical package, which are individually separated by spacers (3) in order to create slits (5) between the rings (2), which have dimensions adapted to the actual particles.
